

**ABSTRACT**

A method of a union remote controller and a union remote controller information providing system and a method for operating the same is disclosed, in which various electronic apparatuses are controlled just by downloading simple remote controller information regardless of whether an electronic apparatus is on the market, kinds, manufacture companies, and model names. The union remote controller includes a data base for storing remote controller information correspondingly to manufacture companies and models; and a server for operating an Internet site which obtains remote controller information provided from manufacture companies of each electronic apparatus, stores them in a data base, and provides remote controller information according to a user's request. Since it is possible to control multiple electronic apparatuses with one remote controller, and it is also possible to control products which will be on the market later by simply downloading data, there is no temporal and economical inconvenience for a user to maintain a number of remote controllers.
